### MIQUEST

A Hypertension audit tool was developed and funded by Daiichi Sankyo UK Ltd in association with Harvey Walsh (a healthcare intelligence agency) as a service to medicine. It is a website that hosts an automated and bespoke MIQUEST\* audit that has been developed to assist GP Practices in identifying their registered patients with hypertension that are suitable for a review. The website will also collate the audit results into a series of standard reports. Reports from this tool include:

- Patients who are currently not achieving QOF Blood Pressure (BP) target >140/90mmHg
- Patients who have diabetes and who are not achieving QOF BP target for Diabetics >130/80mmHg
- Patients aged over 80 who are currently not achieving QOF BP target >150/90mmHg
- Patients prescribed 2 or more antihypertensive medicines and are not achieving BP targets
- Patients prescribed 3 or more antihypertensive medicines and are not achieving BP targets
- Patients who have been referred to a specialist cardiology service within the last 12 months

\* MIQUEST (Morbidity Information Query and Export Syntax), A health query language common to all GP computer systems which works by extracting lists of patients that match the READ codes defined in the bespoke audit search, (Secured NHS N3 connection required)
